

Connecting MJR03 & MJR04 Water Filters

Aim

The MJR03 Water Filter for Ice Machines and MJR04 Water Filter for Coffee Machines & Combination Ovens can be chained together to increase the overall softening capacity of an installation. This brief guide aims to show how the MJRCF coupler/joiner part is inserted between units as part of an installation.

Parts Required

- 2 (or more) MJR04/MJR03 Water Filter Units
- 1 (or more) MJRCF Coupler/Joiner units

Steps

1. On the side of the water filter unit that you want to conjoin to another water filter unit, remove the securing clip from around the standard $\frac{3}{4}$ " connection.

2. Pull out the standard $\frac{3}{4}$ " screw fixing. The fixing is pushed into the water filter and should easily pop out with a little force.
3. Insert the new MJRCF coupler/joiner fitting into the water filter. Apply a little force until it 'clicks in' to the unit and makes a water-tight seal.

4. Re-seat the securing clip to hold the coupler/joiner in place.
5. Repeat steps 1-4 on all units, as required to conjoin them together.
